

**SPECIFICATION SHEET FOR
NUTRI-PAK® 16-16-16 1 & 3-YEAR
CONTROLLED RELEASE FERTILIZER PACKETS**

Commercial Fertilizer:

Nutri-Pak® 16-16-16 is recommended for new or established plantings of fruit, nut and flowering tree and shrubs. It can also be used on any tree, shrub or evergreen.

Standard Formulation: Guaranteed analysis of 16% total Nitrogen, 16% available Phosphoric Acid and 16% soluble Potash (**16-16-16**) packaged in a patented controlled release packet.

Nutri-Pak® provides nutrients to the plants only during the growing season when it is needed, and normally lasts for 1 year when using the ½ oz. packets and 3 years when using the 2 oz. packets, (may last up to 2 years or 5 years in northern zones depending on which size packet is used).

Nutri-Pak® is applied next to the roots, with no danger of burning. It feeds the roots directly with no loss of nutrients through runoff or leaching. Since the packets are installed unopened, it is not only easy to use, but it's safer for you to handle because you never come into contact with the fertilizer itself.

Caution: Nutri-Pak® packets are **not** to be opened and emptied directly into the soil. This would destroy the long-term effectiveness of the product, and nullify the controlled release design of the special packaging. In addition, it might cause root burn.

Directions:

New Tree Plantings

Place 2 or more packets 6-8 inches deep in the planting hole evenly spaced around the outer edges of the roots. For new plantings over 1" in caliper diameter, use 2 packets per additional caliper inch of tree trunk diameter.

Established Tree Plantings

Bury 2 packets per caliper inch of tree trunk diameter, 6-8 inches deep evenly spaced around the drip line of the tree.

Shrubs and Bushes

Follow tree-planting instruction for placement, and use 2 packets per shrub or bush. For plants larger than 2 feet, use 1 packet per foot of height or spread.
